

Mario Galán Sobrino

mariogalsobdev@gmail.com | <https://mariogalsob.github.io> | +34 623761022 | Valencia, Spain

Education

Sheffield Hallam University

Sep 2023 - May 2024

Bachelor in Computer Science for Games | First Class Honours

ESAT (Escuela Superior de Arte y Tecnología)

Oct 2020 - Jul 2023

HND in Computing - L5 | Grade Distinction

Experience

Game Programmer & Level Designer at FrameOver

Jan 2025 - Jul 2026

I worked on **The9thDragon**, a game developed using Unreal Engine 5. As a game programmer, I was in charge of features such as: implementing the AI for multiple enemies, camera work, weapon system and NPC pathing behaviour. As a level designer, I took on tasks such as: improving navigation, adding lighting, narrative design and set dressing.

Gameplay and AI Programmer at Dark Moth Studio

Sep 2022 - Jul 2023

I was part of the development team for **Invicta: The Next Queen**, which was developed using Unreal Engine 4. Some of the features I was in charge include: AI for one of the final bosses, inventory system, hazards (spikes, trapdoors and falling platforms), checkpoints, doors. The game was nominated to the Rookie Awards 2024 and ended up as a finalist.

Projects

Python Telemetry Application

Jun 2025 - Jun 2026

- Python programming using FastF1, Matplotlib, Tkinter, Seaborn...
- Charts with detailed session data (tyre strategy, top speeds, lap time distribution...).
- Graphs with detailed lap data (speed, throttle, brake, RPM, delta, track map...).
- The app has an interactive UI for the user to select any race, session and drivers.

PlayStation®5 Game Project

Jan 2024 - May 2024

- Graphics engine made from scratch using C++ alongside the PlayStation®5 API.
- Game developed upon our custom-built engine alongside designers and artists.
- Implemented PBR and normal mapping to improve the look of the game.
- Built a custom game engine UI using ImGui for the development of the game.
- Nominated to Game Republic Student Showcase 2024.

Procedurally Generated 3D Terrain

Sep 2023 - Dec 2023

- Implemented on a custom-built engine made from scratch using C++ and OpenGL.
- 3D procedural generation using Wave Function Collapsed.
- Algorithm optimization using multi-threading, chunks and improved data accesses.

Custom-Built Graphics Engine

Sep 2022 - Jun 2023

- Made from scratch using C++ and OpenGL.
- Entity Component System and custom-built ImGui editor for easier usability.
- The engine includes: deferred rendering, normal mapping, PBR and blur post-process.
- Other features such as: multiple lighting types, cascade shadow mapping and cubemap.

Skills

Programming languages:

- C, C++, Python, C#, Kotlin, Java

Source Control:

- GitHub, Perforce, Bitbucket, Plastic SCM

Game Engines:

- Unreal Engine 4, Unreal Engine 5, Unity

Render:

- OpenGL, GLSL, HLSL, PlayStation®5 API, ImGui

Languages

English - Advanced (C2)

IELTS Academics certificate. First-hand experience with the language living and studying in Sheffield, United Kingdom. I have also taught private English lessons.

Spanish - Native

Awards

Transform Together Scholarship

Jun 2023

An extremely competitive scholarship awarded by Sheffield Hallam University.
